Product # P I I T 1 0 0 0

EPA EST # 065016-OHF001

1 Trap, 1 Blue Lamp, 3 STIKY™ Trapping Sheets

MADE in China, Assembled in USA

Holds over 300 house flies!

Easy to use

(Actual photo of Sticky Sheet in use.)

PREPARING THE PLUG IN FLY LIGHT FOR USE:

Remove unit from box and rotate the night light so the electrical blades are pointing to the back of the unit.

Remove the front cover. (It is a snap fit)

Take one of the plastic sticky sheets. Fold along the crease so that two edges point up from the sticky surface.

Peel off the protective cover and dispose of it.

Place the sticky sheet in the Plug In Fly Light with the sticky surface facing away from the lamp.

Replace the front cover and plug the unit into an electrical outlet where you want to use it. Turn the switch on.

WHERE TO USE THE PLUG IN FLY LIGHT

Do not place it where water will splash on it or in direct sunlight. The unit works best when it does not compete with other light sources so it will work best at night. Insects are attracted by the blue light so they need to see it. If insects can't see it they won't come. The use of odors and attractants will increase its effectiveness.

CHANGING THE STICKY SHEET

When the sticky sheet is full of insects, turn the switch off and remove the trap from the electrical outlet. Remove the front cover and the sticky sheet. Dispose of the sheet in your normal trash. Avoiding contact with the insects is a good idea since you don't know where they have been. Install a new sheet, replace the front cover and plug the unit back into the electric outlet. Turn the switch on. Any glue you get on your hands may be removed with baby oil or vegetable oil. The adhesive is non-toxic.

CHANGING THE BULB

Turn the switch off and remove the trap from the electric outlet. Take the front cover off and remove the sticky sheet. Screw out the old bulb and replace it with a new one. Put the sticky sheet back in the trap and replace the front cover. Plug the trap in and turn the switch on. Bulb and sticky sheet replacement are the only two customer services authorized on PIIT1000 .

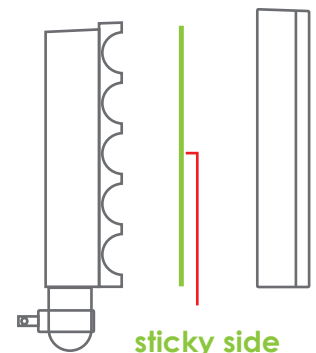

HELPING THE PLUG IN FLY LIGHT

Placing a ripe banana or other odorous items near the unit will increase its effectiveness. Cider vinegar is attractive to fruit flies. There are pheromones (sex attractants) and other scents that will help attract insects to the trap.

Easy, non-toxic way to get rid of pesky flying insects.

House Flies, Asian Lady Bugs, Mosquitoes, Moths, Gnats, Fruit Flies, Cluster Flies, & many other flying insects.

Flying insects are attracted by the blue light and get stuck on a disposable STIKY™ sheet.

STIKY™ sheet in place with sticky side facing out.

Attractants and baits may be placed in the corners of the trap.

ECO Friendly Reusable
